Conclusion

- This the first observation of $\xi(2230)$ in hadronic Z decays. 51±9 candidates are found

mass	
2230±18 MeV	L3
2234± 6 MeV	BES&MARKIII

- Its production is seen favoured in gluon fragmentation with respect to quark fragmentation

- The production rate is of about 1 per mille (preliminary)

- Confirmations from others experiments are welcome
