K^0_s pair selection

Again to remove combinatorial background, it is requested that K^0_s have a transverse momentum greater than 1.5 GeV and tracks have a transverse momentum greater than 0.4 GeV.

K^0_s candidates in a ±50MeV mass window around the nominal K^0_s mass are accepted.

K^0_s have to carry no more than 70% of the $K^0_s K^0_s$ total momentum
