HW enabled TOF channel = channel that is ON from the hardware point of view and taking data

Enabled inefficient channel = channel that are ON from the hardware point of view but are flagged as inefficient for any of the following reasons:

Enabled noisy channel = channel that have been flagged as noisy during a NOISE scan and yet are enabled

Noisy channel = channel that have been flagged as noisy during a NOISE scan, that can be either enabled or disabled from the hardware point of view

Good TOF channel = not noisy & efficient & enabled
