

Installation/updates repositories for licensed Red Hat Enterprise Linux / Virtualization / Extended Lifetime Support are available only on internal CERN networks.

Access is controlled by CERN Network Sets.

Each system requiring access must be inserted into corresponding network set at:

<https://landb.cern.ch/landb/portal/sets/displaySets>

For Red Hat Enterprise Linux sets are named: "LINUXSOFT RHEL LICENSED XXX"

For Red Hat Enterprise Virtualization sets are named: "LINUXSOFT RHEV LICENSED XXX"

For Red Hat Enterprise Extended Lifetime Support sets are named: "LINUXSOFT RHEUS LICENSED XXX"

where XXX corresponds to network domain (GPN/TN/LCG/ALICE ..etc)

Please note that RHEV/RHEUS cases are special - a very limited number of licensed is available: for these please contact linux service managers before inserting new systems.

For RHEL systems: please add new system to LINUXSOFT RHEL LICENSED XXX (for most cases XXX will be GPN / TN - if not sure on which network the system is - please try inserting it in GPN first, then try TN one)

Please note that for some network above sets have not been created yet: if you need to add a system belonging to a different network domain: please contact linux service managers for set creation.

After the system is inserted in set access control lists are updated automatically on linuxsoft distribution servers within 10 minutes.
