

FAQ:

How can I create a simple TWiki Forms based application?

Answer:

TWiki applications help automate workflows you have at the workplace. TWiki has a built-in database that can be used to write custom web applications. These are wiki applications that run in TWiki.

A typical TWiki forms based application consists of the following pages:

- Application home page, typically containing links to other application pages. It may contain also a report showing data records.
- Form definition page, defining the fields of a record. Details in TWikiForms.
- Template page, used as a template for new data records. It is essentially a TWiki page with a form attached to it. Details in TWikiTemplates.
- Header page: Optional page included in each record page to summarize the record.
- Page with an HTML form to create new records.
- Report page(s). Details in VarSEARCH and FormattedSearch.

TWiki.org has a blog post on [How to Create a TWiki Application](#) where you can learn the details.
