

Systematic effect	Systematic uncertainty (%)		
	0–0.4 mm	0.4–0.7 mm	0.7–40 mm
Closure in 3-track control sample	10	14	50
$\geq 5$ -track template normalization factor	24	24	24
Difference from 3-track vertices to $\geq 5$ -track vertices:			
Modeling of vertex pair survival efficiency	9	20	25
Modeling of $\Delta\phi_{VV}$	3	6	6
Variation of b quark fraction	1	3	6
Variation of b tagging correction factors	0.5	0.5	1
Total	28	35	61
